

## SOLAR-ACTIVE.COM NEW DOUBLE CELL GUIDE

1. The **wings of the silver 'cloths peg' like pinch** are attached to end of 10cm length **positive (red)** and **negative (blue)** terminal wires. **Take care not to hold PV cell hanging by these wires or to pull at wires - this could break solder joint of wire & PV cell**
2. The 10cm wires are long enough to be folded behind the back of the PV cell and held down with electrical tape while leaving the pinch devices showing on either side of PV cell.
3. In use, you have the option to remove the tape and use the full length of wire.
4. **TO REMOVE gold plug from the pinch wings release the two wings by pressing two wings together, and SECURLY grip end of wire and GENTLY pull wire STRAIGHT up and out.** CONTACT: [david@solar-active.com](mailto:david@solar-active.com)
